New Media Interactive Development

The screenshot displays the Visual Studio Code interface with a project named 'app.js - vsc-tutorial'. The left sidebar shows the 'EXPLORER' view with a file tree containing 'WORKING FILES', 'VSC-TUTORIAL', and a subdirectory 'my-app'. Inside 'my-app', there are folders for 'bin', 'node_modules', 'public' (containing 'images', 'javascripts', and 'stylesheets'), 'routes', 'views', 'app.js', and 'package.json'. The main editor area shows the content of 'app.js', which is a Node.js server application using Express.js. The code includes requirements for 'express', 'path', 'serve-favicon', 'morgan', 'cookie-parser', and 'body-parser'. It sets up the view engine to 'jade' and serves static files from the 'public' directory. A 404 error handler is implemented to catch unhandled requests and forward them to an error handler, which logs the error and prints the stack trace.

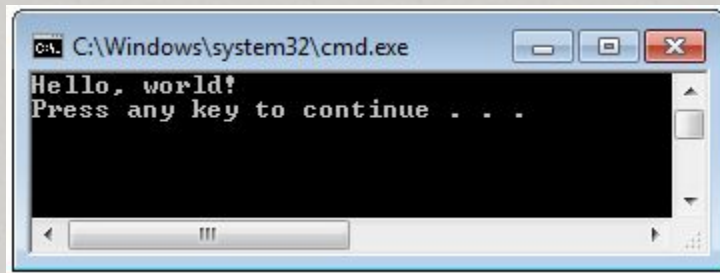

```
app.js my-app
1 var express = require('express');
2 var path = require('path');
3 var favicon = require('serve-favicon');
4 var logger = require('morgan');
5 var cookieParser = require('cookie-parser');
6 var bodyParser = require('body-parser');
7
8 var routes = require('./routes/index');
9 var users = require('./routes/users');
10
11 var app = express();
12
13 // view engine setup
14 app.set('views', path.join(__dirname, 'views'));
15 app.set('view engine', 'jade');
16
17 // uncomment after placing your favicon in /public
18 //app.use(favicon(path.join(__dirname, 'public', 'favicon.ico')));
19 app.use(logger('dev'));
20 app.use(bodyParser.json());
21 app.use(bodyParser.urlencoded({ extended: false }));
22 app.use(cookieParser());
23 app.use(express.static(path.join(__dirname, 'public')));
24
25 app.use('/', routes);
26 app.use('/users', users);
27
28 // catch 404 and forward to error handler
29 app.use(function(req, res, next) {
30   var err = new Error('Not Found');
31   err.status = 404;
32   next(err);
33 });
34
35 // error handlers
36
37 // development error handler
38 // will print stacktrace
```

C#

```
public static void Init() {  
    var xBoot = new Cosmos.Sys.Boot();  
    xBoot.Execute();  
  
    Random xRandom = new Random((int)(Cosmos.Hardware.Global.TickCount  
        + Cosmos.Hardware.RTC.GetSeconds()));  
    // Divide by 100, get remainder  
    int xMagicNo = xRandom.Next() % 100;  
    Console.WriteLine("I am thinking of a number between 0 and 100. What  
    while (true) {  
        Console.ForegroundColor = ConsoleColor.Blue;  
        Console.Write("Take a guess: ");  
        Console.ForegroundColor = ConsoleColor.White;  
        short xGuess = short.Parse(Console.ReadLine());  
        if (xGuess == xMagicNo) {  
            break;  
        }  
  
        Console.ForegroundColor = ConsoleColor.Red;  
        if (xGuess > xMagicNo) {  
            Console.WriteLine("Too high.");  
        } else {  
            Console.WriteLine("Too low.");  
        }  
    }  
    Console.WriteLine("You got it!!!!");  
}
```
